Thank you for supporting our mission!

In2STEM 2025 programme

In²STEM

CASE STUDY

Saeed's story

Saeed applied for In2STEM to gain some experience in computer science. Through their placement and the programme induction event, they have met role models in the field, and gained priceless support and insight into STEM careers.

“I wanted to take part in In2STEM for a free opportunity to have hands-on experience with a professional. I would never have had this opportunity otherwise.

During this placement we have delved into all aspects of computer science. Skills I have learned include cybersecurity and the dangers of it, as well as how to protect your own data.

My highlight of In2STEM has been meeting others who come from similar backgrounds and are now very accomplished. The value of role models is really important. Students may not be able to envision themselves, until they meet someone who has gone through the same hardships and come out the other side.

I would 100% recommend the In2STEM programme to other students! It is a unique opportunity that you wouldn't get in a lot of other places. Paired with a really good mentor, it is a very personal experience.”

Saeed

Hear from the Placement Host

“I want to give back and reflect on my own experience growing up. I have seen the programme is productive and helpful to the participants. They are highly skilled - I actually rate them close to my second year students!
